

CORPORATE EVENTS

Corporate Functions Tech Rider

Compact technical requirements for Luke Stamer corporate event performances.

VENUE / AV REFERENCE

Forward this straight to facilities, AV, or the venue. The setup is small, practical, and built to fit around the event rather than take it over.

Power

1x standard 220V/13A outlet within roughly 3m of the performance position.

Footprint

Approximately 2m x 1.5m, armless chair supplied by venue, no riser required.

Amplification

I bring my own speaker, which covers rooms of roughly 100 guests or fewer. For larger rooms and outdoor spaces, please provide a PA suited to the venue and guest count.

Microphone

Clip-on lavalier instrument mic, connecting to the desk by XLR or 6.35mm jack. Requires 48V phantom power. I carry a backup dynamic XLR mic — please tell me in advance if phantom power is unavailable.

Connection

Bluetooth input preferred, so I can adjust volume, song choice, and set length on the fly as the room responds. A wired run is fine whenever a sound technician is on the desk.

Sound check

30-45 minutes before doors, or at the earliest quiet window your run sheet allows.

Load-in/out

Self-managed, approximately 20 minutes each, with a discreet route preferred.

Attire

Black tie, business formal, or an agreed dress code to match your event standard.

Integration

Can slot into MC, DJ, AV, and speech cues; can play to a click or hold for live timings.

SUPPORT NOTE

Want the rider checked against your floor plan or run sheet first? Send me the date, venue, and schedule, and I will come back with availability and the setup notes.
