

Solo cello sets full tech rider

I perform solo amplified cello with backing tracks. The setup is compact and self-managed — this single page covers input, playback, monitoring and timing.

INPUT

Clip-on instrument mic to the desk. XLR or 6.35 mm jack, 48 V phantom power.

PLAYBACK

Backing tracks over Bluetooth, or wired when a technician runs the desk.

SOUND CHECK

60–90 minutes before the first set.

SEATING

One armless chair. No riser required.

Amplification — two setups, pick by room size

TWO OPTIONS

ROOMS UP TO 100 GUESTS

I bring the speaker

I can use my own powered speaker suited to small-medium venues. The venue provides an armless chair for me to play on.

LARGER ROOMS & OUTDOOR VENUES

Venue provides the PA

Please provide a PA suited to the space and guest count, plus a monitor so I can hear both the cello and the backing track on stage.

Signal & monitoring

MICROPHONE

Clip-on instrument microphone to the desk via XLR or 6.35 mm jack. Requires 48 V phantom power — tell me in advance if it's unavailable and I'll bring my dynamic XLR backup.

PLAYBACK & CONNECTION

Bluetooth is preferred so volume, song choice and set length can flex as the room changes. A wired connection is fine when a sound technician is on the desk.

MONITORING

I need to hear both the cello and the backing track — through the venue PA, or a dedicated monitor in large or outdoor venues.

Room & timing

POSITION & SEATING

One armless chair at the performance position. No riser required.

POWER

One standard 220 V outlet within reach of the performance position.

SOUND CHECK

60–90 minutes before the first set.

ATTIRE

Black tie, business formal, or an agreed dress code to represent your brand.

BEFORE THE DAY

Send the venue, guest count and run sheet, and I'll confirm the input, playback and monitoring plan in advance.
